                                                                                                                                                The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               830 Primers useful for synthesizing use in genetic manipulation -

Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A;Note: authors translated the codon AGG for residue 1714 as Pro
C;Comment: Trichohyalin is a protein of the medulla of the hair and of the inner root
C;Covalent modifications to this protein include conversion of arginine to citrulline ar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 12

Chem. 274:18446-18454(1999).

FUNCTION: Adapter protein that may provide indirect link between the endocytic membrane traffic and the actin assembly machinery. May regulate the formation of clathrin-coated vesicles.

SUBUNIT: Interacts with dynamin, SNAP-25 and SNAP-23. Clusters several dynamin in a manner that is regulated by alternative splicing. Also binds clathrin-associated proteins and other components of the endocytic machinery, such as N-WASP, Eps15 and solutions.

Cytogenet. Cell Genet. 78:213-215(1997).

-i-FUNCTION: Adapter protein that may provide indirect link between the endocytic membrane traffic and the actin assembly machinery. May regulate the formation of clathrin-coated vesicles. Isoform 1 could be involved in brain-specific synaptic vesicle recycling.

-i-SUBUNIT: Interacts with dynamin, SNAP-25 and SNAP-23. Clusters several dynamin in a manner that is regulated by alternative splicing. Also binds clathrin-associated proteins and other components of the endocytic machinery, such as N-WASp, Eps15 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pucharcos C., Casas C., Nadal M., Estiv

TISSUE SPECIFICITY: Ubiquitous in adult and fetal tissues, excision 1 which is expressed almost exclusively in the brain. Highly expressed in skeletal muscle, heart, spleen, ovary, tes and all fetal tissues tested. Expressed at lower levels in thy blood, lung, liver and pancreas. Isoform 1 is expressed in all brain regions; not expressed in the spinal cord.

DOMAIN: $H3-3, $H3-4 and $H3-5 but not $H3-1 and $H3-2 domains bind to dynamin (By similarity).

DOMAIN: The KLERQ domain binds to SNAP-25 and SNAP-23 (By

Interacts with Stonin 2.

SimcELLULAR LOCATION: Cytoplasmic Recruited to the plasma membrane upon EGFR activation and localizes to coated pits.

PTW: Phosphorylation on Tyr-850 is involved in the internalization of EGFR. Not required for membrane translocation after EGF treatment or for targeting to coated pits, but essential for a subsequent step in EGFR endocytosis.

SIMILARITY: Contains 3 EH domains.

SIMILARITY: Contains 2 EF-hand calcium-binding domains.

SIMILARITY: Contains 2 ubiquitin-interacting motif (UIM) repeats.
